Technology Training at work for you

RESOURCES YOU NEED

The SecureXperts Security Learning (SSL) team provides your organization with tailored consulting services on next generation learning methodologies that you will need to take a proactive program level approach in making smarter business decisions and deliver effective, timely and affordable training to their employees.

As part of our Security Training program, we incorporate innovative and collaborative technologies like in person training, online training, virtual meeting centers, and internet based learning environments that can provide secure, seamless connections around the world, meeting today's stringent regulatory requirements and covering some of the most relevant and advanced information security techniques such as certificate based authentication and encryption.

Flexible solutions for your business needs

SECURITY FOUNDATIONS

The Security foundations course provides the concepts and terminology used within the information technology (IT) cyber security community to gain fundamental knowledge to understand how cyber security ties into the overall use of best practices for managing risk within an organization. They include:

- IT Security and Cyber Security Terminology
- Identity versus Entity Management
- Personal Online Computer Security and Privacy
- Personally Identifiable Information and Data Classification
- Cyber Security Threats and Vulnerabilities
- Mobile Device Security

End-User Security Awareness Training (EUSA)

The End-User Security Awareness course is an informative, non-technical, and highly effective awareness course covering the top security issues in which enterprise end-users jeopardize information assets and the systems that are used to protect, process, store or transmit organizational data some of the questions they'll be able to answer include:

- Who is responsible for cybersecurity within your organization?
- What resources are available within your organization if you suspect a cybersecurity incident has occurred?
- Where can you find the document that states how an organization protects it's Physical and Intellectual assets?
- When does an employee inadvertently put there company at risk?
- Why is an effective cybersecurity program important?
- How can an employee take proactive steps to protest their organizations privacy?

Upon completion of the in-person or online course, users will complete a 15 item questionnaire which measures the individual's retention of the information presented in the course. Once a student passes with a score of 70% or higher, a Certificate of Completion will be available for print/save.

CUSTOM SOLUTIONS

The SSL Training program is a scalable system that provides a total and complete foundation for all aspects of learning. With our training offerings you can assess, plan, deliver, manage and improve both self-paced and instructor led training processes.

OUR CUSTOMERS

Our Customers range from multi-national enterprise corporations to privately held companies, from financial, healthcare, energy, educational philanthropic, federal, state, local and tribal governments as well as other regulated markets.

Why Cyber Security Awareness Training?

Computer security awareness is not a technology it's a mindset. It's the knowledge and attitude members of all organizations must possess in the areas of protection of the physical, and especially, the integrity of IT assets and data. Employees across the globe make simple mistakes, which expose information and based assets that harm organizations. A cyber security awareness program is crucial for communication and instruction of best practices and security requirements designed to protect your most valuable assets. With appropriate awareness training, corporations can enlist the assistance of their employees to mitigate risks.

Who Should Take This training?

Everyone that touches a computer, anyone wanting to learn about cyber security, anyone with a desire to become more marketable by obtaining certification in security awareness and for organizations that need to maintain compliance.

What will this training do for you?

The SSL, security awareness course material, products and services has been designed to include all best practice areas of information security. Organizations following the prescribed guidelines by our course instruction modules will be fully compliant with all known mandates industry specific requirements regulated or recommended by the following:

Federal Financial Institutions Examination Council's (FFIEC), Payment Card Industry (PCI-DSS), HIPAA, FISMA, The Computer Security Act of 1987, ISO 17799, NIST, NERC, OMB circular number A-130 Appendix III, Homeland Security Presidential Directive 7 (HSPD-7,) AR-25, BS7799, COBIT, BASEL II, GLBA, and Section 508.

Raise awareness, reduce business risk and achieve compliance with best business practices that align with all known regulations, guidelines and standards!

SecureXperts Security Learning

Learn like the pros

Increased internal and external training demands require far more resources than companies have to spare in these heavily regulated times. In-house designed solutions rarely are cost effective and almost always fall short of meeting ever changing requirements without any assurance that it would meet best business practices. Employee tracking and annual reporting requirements are often viewed as an overwhelming burden and drain on limited resources, which are better, utilized on producing goods and services. These are just some of the industry's unsolved problems SecureXperts easily handles with their cost effective solution.

*Let SecureXperts, Inc. relieve the stress of providing security awareness training and reporting requirements associated with regulations, guidelines and standards for you/your organization. **Your cost just \$595.00 per person***
