

PSA Cybersecurity Committee: Chairman Update

Your PSA Network Cybersecurity Committee is back at it for the 2018-2019 season with some new members, some existing cyber tool additions, and some new product offerings. First, we've added Dan Dollinger and Josh Cumming to the team. Both bring a wealth of electronic security, networking, and cyber security experience to the committee. Please check out their bios to learn a little more about their experience and their companies.

Second, the committee members have each committed to taking on another of the CSC Top 20 Controls and adding to PSA's existing whitepaper which shows you in detail how to implement a tool to mitigate a potential vulnerability that has been identified by the CSC as one of their top 20 cyber security priorities. We believe that this document can help you or your team get started securing your environment with little previous experience.

Third, the entire PSA Security Network team and this committee have been working tirelessly with our vendor community to identify cyber security product offerings that make sense for our integrators and fit within the PSA business model. I am anticipating that we will hear of some new vendor announcements at the upcoming PSA Convention, so by the time you read this, one or more deals should be done. I hope you're able to incorporate some additional cyber security measures in to your current offerings that will protect your client's electronic security system investment.

Lastly, we've developed a workshop around firewalling best practices, and a business risk assessment course for the March 2019 PSA TEC conference. Look for those course descriptions to be published soon and we hope you'll join us for those sessions in Denver next spring.

Stay Safe,

Andrew Lanning, Chairman

PSA Network Cyber Security Committee
