

## PSA Cybersecurity Committee Chairman Update

Change, Shift, Migration, Merge, Amalgamation. All notions we have heard floating around conversationally regarding the coming-together of Cyber and Physical Security for the last couple years. As this notion draws closer to reality it is the Cybersecurity Committee's objective this term to reintroduce PSA members to the tools, methods and resources available to them, along with fresh services and tools that will be developed, by PSA and the Cybersecurity Committee. Educating the PSA members on the WHY part of adopting and implementing the ideas is also a top priority. As the Cyber horizon edges closer to the SI shores there is a greater urgency to educate and prepare our members for the changing business landscape and to embrace the new Cyber and Physical Security posture. Ultimately, we hope to produce content that will help PSA members embrace the Cyber opportunity by outlining a clear plan to implement and execute a Cybersecurity program for their own enterprise and physical security deployments and possibly, for Cybersecurity services offered to their customers.

We are pleased to have committee members Matt Boehm, Paul Schmick and Josh Cummings returning for another term and welcome four new committee members, Josh Glover, Tyrone Chambliss, Daniel Brooks and Daniel Dollinger. Andrew Lanning will also remain involved with the committee, and we welcome his sage guidance and knowledge of all things Cyber. Collectively the Cybersecurity Committee represents a well-rounded group of Cyber, IT and Physical Security experts. We have one remaining seat on the Cybersecurity Committee and are very interested in filling the position with one of the many professional women from the PSA community.

I personally have tremendous enthusiasm for the journey ahead and look forward to an exciting and dynamic term as Chairman.

Gary Hoffner, Chairman

PSA, Cybersecurity Committee
